## Experience

July 2020 - Present

Synergy International Systems

November 2020 - Present

Full-Stack Software Engineer

- Reduced manual case-processing time by 25-40% by delivering customized workflow and document management features.
- Improved client operational efficiency by 30% by developing customizable workflow-driven tools for case filing, scheduling, document management, and tracking.
- Developed and maintained customizable full-stack enterprise solutions tailored to client requirements.
- Built responsive frontend and backend functionality using Java, SQL, and web technologies.
- Integrated third-party applications and services to improve interoperability across systems.
- Implemented RabbitMQ-based messaging to enable reliable inter-application communication.
- Troubleshooted production issues and delivered enhancements to improve system stability and usability.
- Collaborated with cross-functional teams and stakeholders to translate business needs into technical solutions.

July 2020 – August 2020

*Software Engineer Intern*

- Participated in a structured software engineering internship focused on Java, SQL, web development, and enterprise application fundamentals.
- Learned core programming concepts including OOP, database design, and client-server application architecture through hands-on tasks and mentorship.
- Learned industry-standard development practices including Git-based version control, teamwork, and code maintenance.
- Contributed to debugging, testing, and maintaining existing application modules to improve functionality and reliability.
- Assisted in the development and maintenance of application modules supporting business and client needs.

January 2020 – March 2020

*Energize Global Services – Software Engineer Intern*

- Built a strong technical base in core computer science concepts relevant to backend and full-stack development.
- Completed hands-on training in Java and core software engineering concepts within a structured internship program.
- Developed solid knowledge of programming best practices, exception handling, and maintainable code design.
- Applied data structures & collections, and algorithms to solve programming tasks efficiently.
- Gained practical exposure to multithreading and concurrency concepts in Java applications.

---

## Education

### **Russian-Armenian University – Master of Science in System Programming (also BS in Applied Math & Informatics)**

Coursework includes: Intro to CS, OOP, Data Structures, Algorithms, Database Systems, Web Development, etc.

---

## Languages

- English – upper-intermediate
- Russian – fluent
- Armenian – native

## Projects

- [Restaurant Management Application](#) (Java)
- [Event Booking System](#) (Java & Spring, JS, Postgres)
